

AMENDMENT TO THE CLAIMS

The following is a detailed listing of all claims that are, or were, in the Application.

1. (Currently amended) A method for sharing an application, the method comprising:

determining a position and a size of a shared application window by monitoring function calls made by the application; and

determining a position and a size of a non-shared application window by monitoring function calls made by the non-shared application;

if the non-shared application window overlaps the shared application window,
determining a position and a size of an overlapping region;

capturing a screen shot of an image corresponding to the shared application window; and

transmitting the screen shot and information for the overlapping region to a viewer.

2. (Original) The method of Claim 1 further comprising:

transmitting the position and the size of the shared application window to a viewer.

3. (Cancelled)

4. (Cancelled)

5. (Cancelled)

6. (Original) The method of Claim 1 further comprising:
determining whether the position or the size of the shared application window has changed by monitoring function calls made by the shared application; and
if the position or the size of the shared application window has changed, determining a new position and/or a new size of the shared application window.
7. (Original) The method of Claim 1 further comprising:
periodically capturing an image corresponding to the shared application window.
8. (Original) The method of Claim 7 further comprising:
periodically transmitting the captured image to the viewer.
9. (Currently amended) A computer-readable storage medium storing a computer program executable by a computer, the computer program comprising computer instructions for:
determining a position and a size of a shared application window by monitoring function calls made by the application; and
determining a position and a size of a non-shared application window by monitoring function calls made by the non-shared application;
if the non-shared application window overlaps the shared application window,
determining a position and a size of an overlapping region;
capturing a screen shot of an image corresponding to the shared application window; and
transmitting the screen shot and information for the overlapping region to a viewer.

10. (Original) The computer readable storage medium of Claim 9 further comprising computer instructions for:

transmitting the position and the size of the shared application window to a viewer.

11. (Cancelled)

12. (Cancelled)

13. (Cancelled)

14. (Original) The computer readable storage medium of Claim 9 further comprising computer instructions for:

determining whether the position or the size of the shared application window has changed by monitoring function calls made by the shared application; and
if the position or the size of the shared application window has changed, determining a new position and/or a new size of the shared application window.

15. (Original) The computer readable storage medium of Claim 9 further comprising computer instructions for:

periodically capturing the image corresponding to the shared application window.

16. (Original) The computer readable storage medium of Claim 15 further comprising computer instructions for:

periodically transmitting the captured image to the viewer.

17. (Currently amended) A data conferencing system comprising:
 - a presenter computer connected to one or more server computers via a global area network;
 - a viewer computer connected to the one or more server computers via the global area computer network; and
 - a computer program executable by the presenter computer, wherein the computer program comprises computer instructions for:
 - determining a position and a size of a shared application window by monitoring function calls made by the application; and
determining a position and a size of a non-shared application window by monitoring function calls made by the non-shared application;
if the non-shared application window overlaps the shared application window, determining a position and a size of an overlapping region
capturing a screen shot of an image within the shared application window; and
transmitting the screen shot and information for the overlapping region to the viewer computer.

18. (Original) The data conferencing system of Claim 17 further comprising computer instructions for:
 - transmitting the position and the size of the shared application window to the viewer computer.

19. (Cancelled)

20. (Cancelled)

21. (Cancelled)

22. (Original) The data conferencing system of Claim 17 further comprising computer instructions for:

determining whether the position or the size of the shared application window has changed by monitoring function calls made by the shared application; and
if the position or the size of the shared application window has changed, determining a new position and/or a new size of the shared application window.

23. (Original) The data conferencing system of Claim 17 further comprising computer instructions for:

periodically capturing the image corresponding to the shared application window.

24. (Original) The data conferencing system of Claim 23 further comprising computer instructions for:

periodically transmitting the captured image to the viewer computer.

25. (New) A method performed on a computer for sharing an application using screen sampling, the method comprising:

receiving from a presenter a selection of a shared application;
monitoring function calls made by the shared application to dynamically determine a position and a size of a window for the shared application;
monitoring function calls made by a non-shared application to dynamically determine a position and a size of a window for the non-shared application;

comparing the position and the size of the window for the shared application against the position and the size of the window for the non-shared application to determine any overlapping regions;

capturing a screen shot of an image corresponding to the window for the shared application; and

transmitting the screen shot of the image corresponding to the window for the shared application and information for the overlapping regions to a viewer.

26. (New) The method of Claim 25 further wherein:

the transmitted screen shot of the image corresponding to the window for the shared application and information for the overlapping regions can be used to display the image to the viewer with the overlapping regions filled in with an arbitrary color.

27. (New) The method of Claim 25 further comprising:

compressing the screen shot of the image corresponding to the window for the shared application.

28. (New) The method of Claim 25 further comprising:

capturing a screen shot of an updated image corresponding to the window for the shared application;

transmitting the screen shot of the updated image corresponding to the window for the shared application to a viewer.

29. (New) The method of Claim 25 further comprising:

periodically capturing the image corresponding to the shared application window.

30. (New) The method of Claim 25 further comprising:
determining whether the position or the size of either the window for the shared application or the window for the non-shared application has changed; and
transmitting information about the change in the position or the size to a viewer.

31. (New) A computer-readable storage medium storing a computer program executable by a computer, the computer program comprising computer instructions for:
receiving from a presenter a selection of a shared application;
monitoring function calls made by the shared application to dynamically determine a position and a size of a window for the shared application;
monitoring function calls made by a non-shared application to dynamically determine a position and a size of a window for the non-shared application;
comparing the position and the size of the window for the shared application against the position and the size of the window for the non-shared application to determine any overlapping regions;
capturing a screen shot of an image corresponding to the window for the shared application; and
transmitting the screen shot of the image corresponding to the window for the shared application and information for the overlapping regions to a viewer.

32. (New) The computer readable storage medium of Claim 31 wherein:
the transmitted screen shot of the image corresponding to the window for the shared application and information for the overlapping regions can be used to display the image to the viewer with the overlapping regions filled in with an arbitrary color.

33. (New) The computer readable storage medium of Claim 31 further comprising computer instructions for:

compressing the screen shot of the image corresponding to the window for the shared application.

34. (New) The computer readable storage medium of Claim 31 further comprising computer instructions for:

capturing a screen shot of an updated image corresponding to the window for the shared application;

transmitting the screen shot of the updated image corresponding to the window for the shared application to a viewer.

35. (New) The computer readable storage medium of Claim 31 further comprising computer instructions for:

periodically capturing the image corresponding to the shared application window.

36. (New) The computer readable storage medium of Claim 31 further comprising computer instructions for:

determining whether the position or the size of either the window for the shared application or the window for the non-shared application has changed; and

transmitting information about the change in the position or the size to a viewer.

37. (New) A data conferencing system comprising:

a presenter computer connected to one or more server computers via a global area network;

a viewer computer connected to the one or more server computers via the global area computer network; and

a computer program executable by the presenter computer, wherein the computer program comprises computer instructions for:

receiving from a presenter a selection of a shared application;

monitoring function calls made by the shared application to dynamically determine a position and a size of a window for the shared application;

monitoring function calls made by a non-shared application to dynamically determine a position and a size of a window for the non-shared application;

comparing the position and the size of the window for the shared application against the position and the size of the window for the non-shared application to determine any overlapping regions;

capturing a screen shot of an image corresponding to the window for the shared application; and

transmitting the screen shot of the image corresponding to the window for the shared application and information for the overlapping regions to the viewer computer.
